Panel A. Summary by group

Table 1: Log of Total Assets — Estimation Sample (`dumVE=0`)

	n	Mean	Std Dev	Skew.	Kurt.	JB	JB p
yd=0 (non-default)	47	5.5736	1.6772	0.0014	2.2537	1.0908	0.5796
yd=1 (default)	43	5.0770	1.5355	0.0611	2.4770	0.5168	0.7723

Skewness Statisitc the closer to 0 the better, Kurtosis that clostes to 3 the better.

Panel B. Group comparison tests

Test	Statistic	p-value	Notes
Levene (equal variances)	0.2449	0.6219	H_0: variances equal
t-test (means)	1.4606	0.1477	H_0: means equal (equal_var=True)
Point-biserial *r*	–0.1538	0.1477	Correlation with *yd* (0/1)

Notes: Variable is *Log of Total Assets*. Estimation sample defined by `dumVE=0` after sorting by *yd* and the assigned ratio. JB: Jarque–Bera normality test. Levene tests equality of variances. The two-sample t-test uses pooled variances here (per Levene). Point-biserial *r* is the Pearson correlation between *yd* (0/1) and the variable.
